Introduction

System Overview

This REST API Middleware provides a streamlined interface for developers to easily create and order cases, abstracting complex backend processes and enabling seamless and Realtime integration into external applications

Use Cases

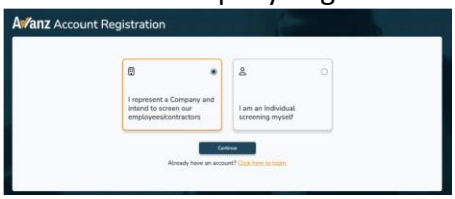

Common use cases for this REST API Middleware include automated case creation from background process, and enabling connection endpoint to submit and track case statuses efficiently with final reports and reducing manual data entry, and ensuring consistent and traceable case submissions from multiple plaForms.

Authentication

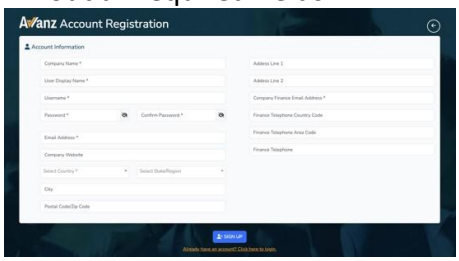

Company & Package Registration

Company registration is required for identifier of the company and for the packages needed to be applied for verification process.

1. Go to Avvanz ScreenGlobal and then click register.
2. Choose the Company Registration.

3. Fill out all required fields.

4. Contact Avvanz Inc. for Package Creation.

API Account Creation

Please contact Avvanz Inc. to provide the Client ID and Client Secret Key

OAuth 2.0

Key	Description
client_id	Provided by Avvanz Inc.
client_secret	Provided by Avvanz Inc.

Base URL

Environment	URL
Production	https://middleware.avvanz.com
Staging	https://staging-middleware.avvanz.com

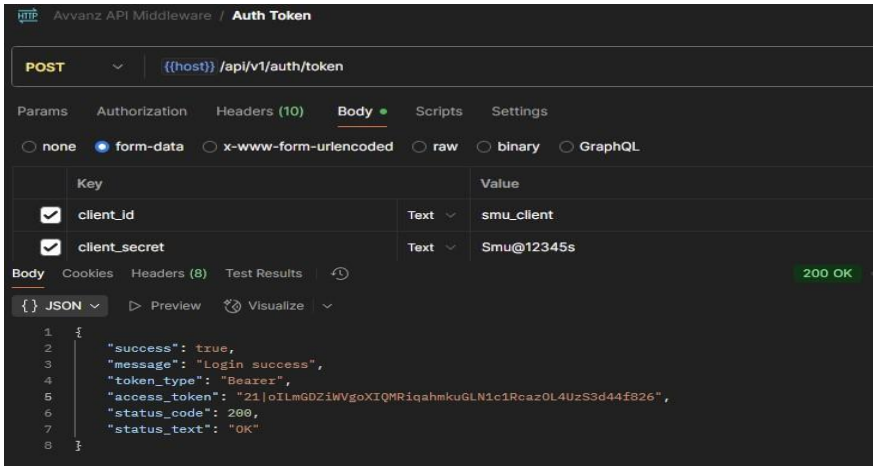

HTTP Accept Headers

Key	Value
Content-Type	application/json

Endpoints

Get Token

Endpoint: HTTP POST /api/v1/auth/token
Description: First required process for the middleware to start the case creation.

Sample JSON:

```
{
    "success": true,
    "message": "Login success",
    "token_type": "Bearer",
    "access_token": "3174|xYWsvYEosHklrusf2wLl2EWEpSc5HP5hi4Z849wQ72374a68",
    "status_code": 200,
    "status_text": "OK"
}
```

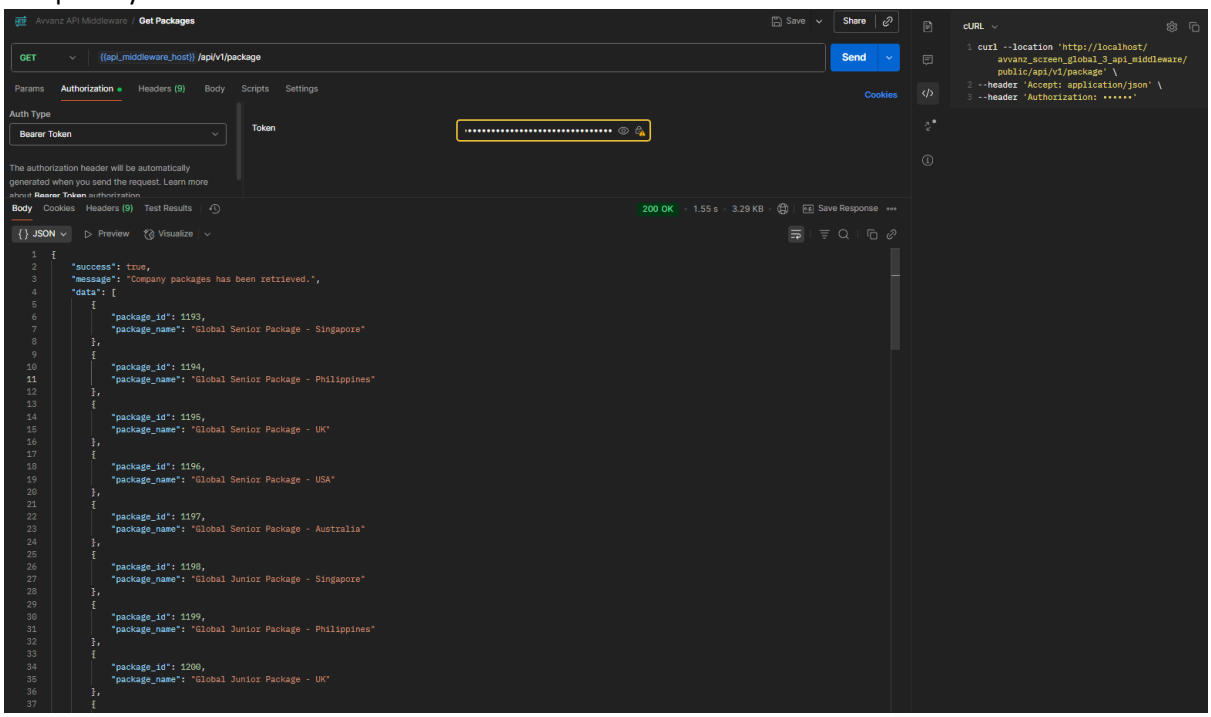

HTTP Headers

Key	Value
Content-Type	application/json
Authorization	Bearer <access_token>

Get Packages

Endpoint: HTTP GET /api/v1/package
Description: Get the list of company account packages.

Sample Payload:

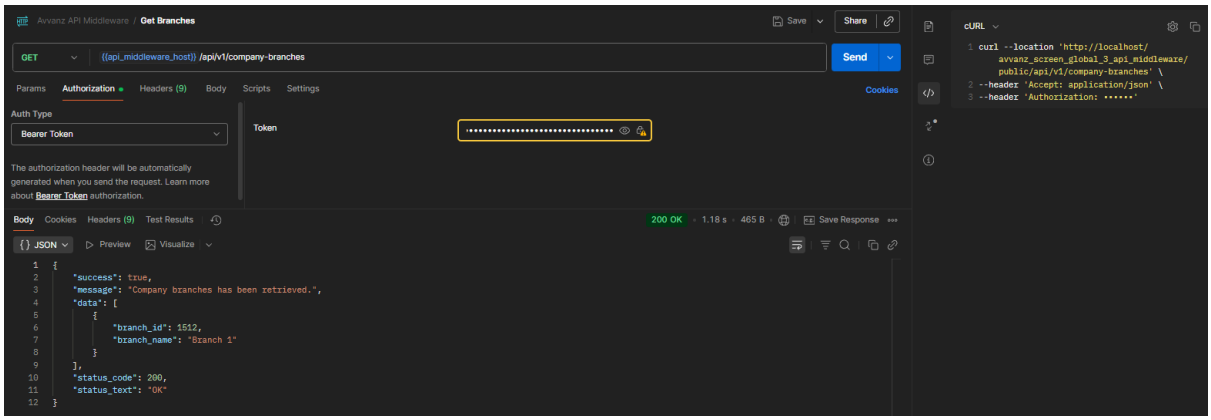

Sample JSON:

```
{
    "success": true,
    "message": "Company packages has been retrieved.",
    "data": [
        {
            "package_id": 1193,
            "package_name": "Global Senior Package - Singapore"
        },
        {
            "package_id": 1194,
            "package_name": "Global Senior Package - Philippines"
        },
        {
            "package_id": 1195,
            "package_name": "Global Senior Package - UK"
        }
    ],
    "status_code": 200,
    "status_text": "OK"
}
```

Get Branches

Endpoint: HTTP GET /api/v1/company-branches
Description: Get the list of company account branches.

Sample Payload:

Sample JSON

```
{
    "success": true,
    "message": "Company branches has been retrieved.",
    "data": [
        {
            "branch_id": 1512,
            "branch_name": "Branch 1"
        }
    ],
    "status_code": 200,
    "status_text": "OK"
}
```

Create Case

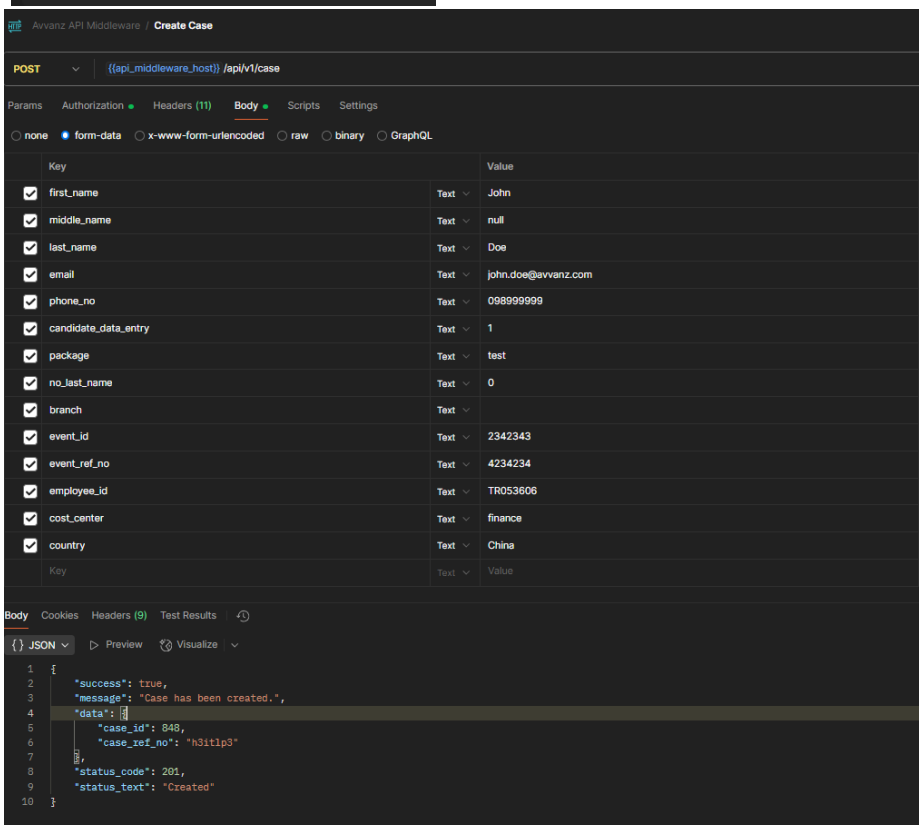

Endpoint: HTTP POST /api/v1/case
Description: First required process for the middleware to start the case creation.
Parameters/body:

Field	Type	Description	Mandatory
first_name	String(100)	First name of the Employee.	Yes
middle_name	String(100)	Middle name of the Employee..	Optional
last_name	String(100)	Last name of the Employee.	Optional
package	String(100)	Package Name for the set of checks to applied for verification process.	Yes
email	String(100)	Email Address of the Employee.	Yes
phone_no	String(50)	Contact No. of Employee.	Optional
no_last_name	Enum(0,1)	1 = The Employee has last name. 0 = The Employee has no last name.	Optional
branch	String(100)	Branch name of the company.	Optional
candidate_data_entry	Enum(0,1)	1 = Employee will fill out the data. 2 = Employer will complete the data of the Employee	
event_id	String(100)	Unique reference ID from client system	

event_ref_no	String(150)	Unique reference No. from client system	
employee_id	String(100)	Employee ID from client system	
cost_center	String(100)	Client Cost Center	
country	String(200)	Employee Country	Required if package checks settings do not have pre-selected country or coverage
requestor_name	String(150)	Case requestor name.	Optional
requestor_email	String(100)	Case requestor email address.	Optional
bu	String(150)	Business Unit name.	Optional

Sample Payload:

```
cURL
curl --location 'http://localhost/
    avvanz_screen_global_3_api_middleware/
    public/api/v1/case' \
--header 'Accept: application/json' \
--header 'Authorization: ••••••' \
--form 'first_name="John"' \
--form 'middle_name="null"' \
--form 'last_name="Doe"' \
--form 'email="john.doe@avvanz.com"' \
--form 'phone_no="098999999"' \
--form 'candidate_data_entry="1"' \
--form 'package="test"' \
--form 'no_last_name="0"' \
--form 'branch=""' \
--form 'event_id="2342343"' \
--form 'event_ref_no="4234234"' \
--form 'employee_id="TR053606"' \
--form 'cost_center="finance"' \
--form 'country="China"'
```

Sample JSON:

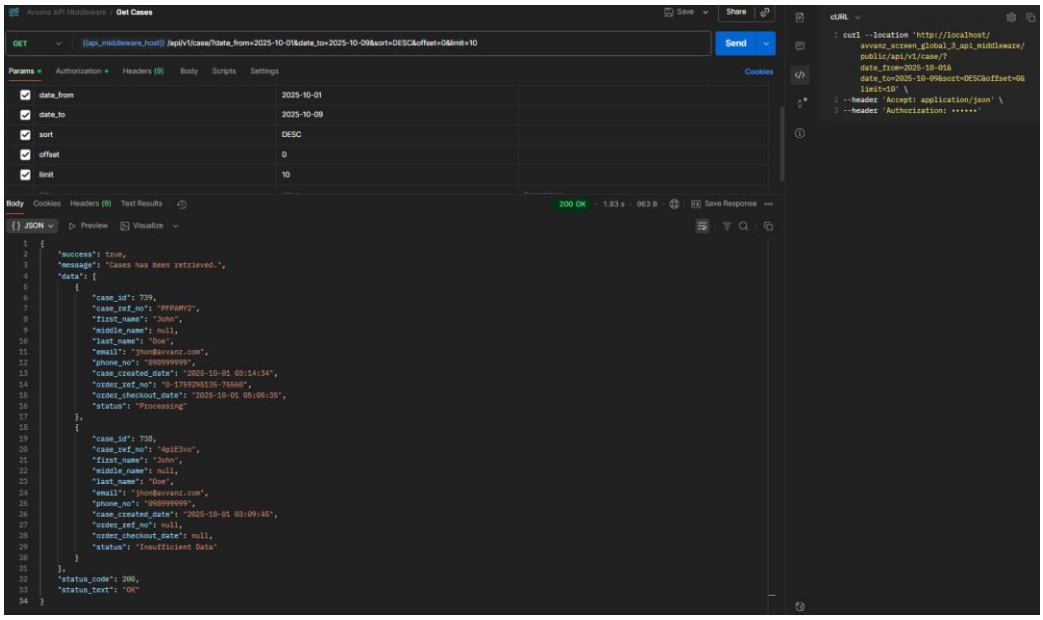

```
{
    "success": true,
    "message": "Case has been created.",
    "data": {
        "case_id": 733,
        "case_ref_no": "tpj4913"
    },
    "status_code": 201,
    "status_text": "Created"
}
```

Get All Cases

Endpoint: HTTP GET /api/v1/case
Description: Get the list of all created cases.
Parameters/body:

Field	Type	Description	Mandatory
date_from	String(10)	Case created date from.	No
date_to	String(10)	Case created date to.	No
sort	String(3)	Sort order (ASC or DESC)	No
offset	String(100)	Offset of the records starts with 0.	No
limit	String(10)	Limit the records per request.	No

Sample Payload:

Sample JSON

```
{
    "success": true,
    "message": "Cases has been retrieved.",
    "data": [
        {
            "case_id": 739,
            "case_ref_no": "PFPAMY2",
            "first_name": "John",
            "middle_name": null,
            "last_name": "Doe",
            "email": "jhon@avvanz.com",
```

```
            "phone_no": "098999999",
            "case_created_date": "2025-10-01 03:14:34",
            "order_ref_no": "O-1759295135-75560",
            "order_checkout_date": "2025-10-01 05:05:35",
            "status": "Processing"
        },
        {
            "case_id": 738,
            "case_ref_no": "4piE3vo",
            "first_name": "John",
            "middle_name": null,
            "last_name": "Doe",
            "email": "jhon@avvanz.com",
            "phone_no": "098999999",
            "case_created_date": "2025-10-01 03:09:45",
            "order_ref_no": null,
            "order_checkout_date": null,
            "status": "Insufficient Data"
        }
    ],
    "status_code": 200,
    "status_text": "OK"
}
```

Update Candidate Info

Endpoint: HTTP PUT /api/v1/case/{case_id}/candidate
Description: Update candidate information. Replace the “case_id” with the correct Screen Global Case ID.
URL Parameters:

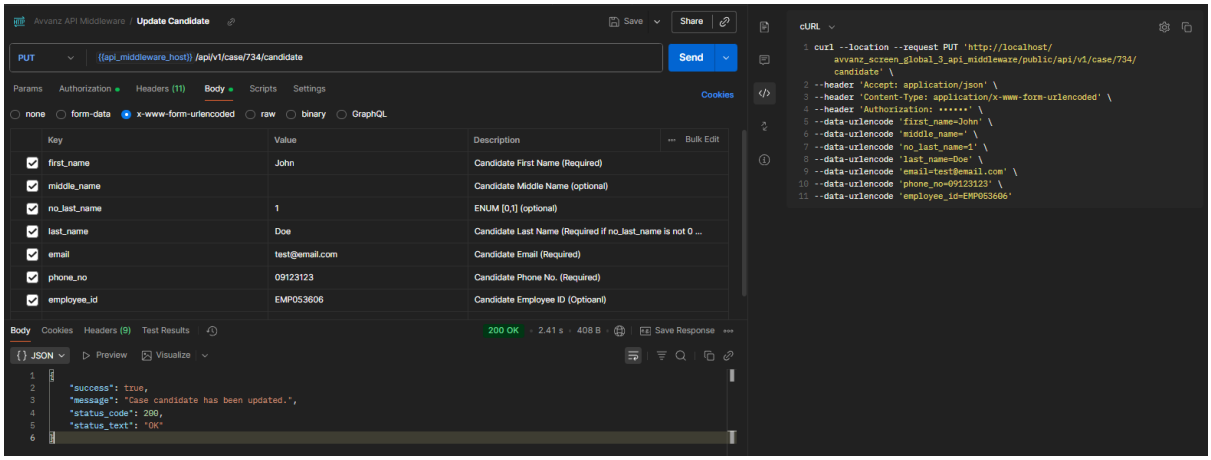

Field	Type	Description	Mandatory
case_id	int	Case ID from create case endpoint	Yes

Parameters/body:

Field	Type	Description	Mandatory
first_name	String(100)	First name of the Employee.	Yes
middle_name	String(100)	Middle name of the Employee.	No
last_name	String(100)	Last name of the Employee.	Optional
email	String(100)	Email Address of the Employee.	Yes
phone_no	String(50)	Contact No. of Employee.	Optional
employee_id	String(100)	Employee ID from client system	

no_last_name	Enum(0,1)	1 = The Employee has last name. 0 = The Employee has no last name.	Optional

Payload Sample:

Sample JSON

```
{
    "success": true,
    "message": "Case candidate has been updated.",
    "status_code": 200,
    "status_text": "OK"
}
```

Get Case Status

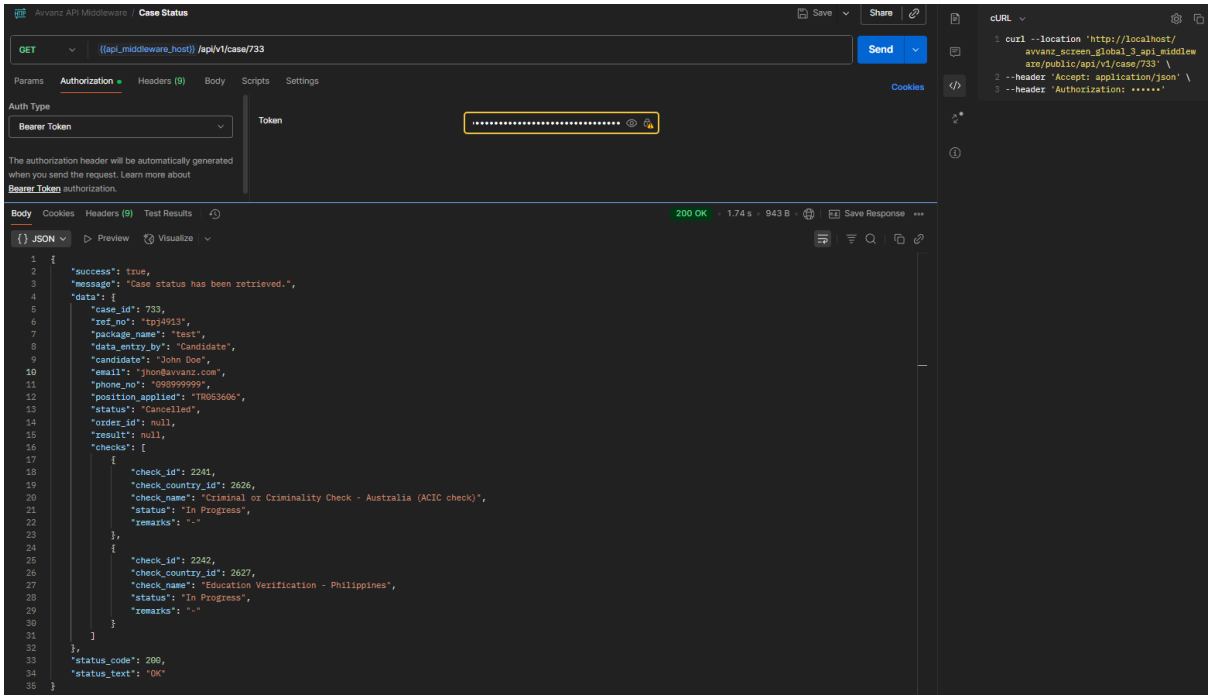

Endpoint: HTTP GET /api/v1/case/{case_id}

Description: Get Case status and details. Replace the “case_id” with the correct Screen Global Case ID.

URL Parameters:

Field	Type	Description	Mandatory
case_id	int	Case ID from create case endpoint	Yes

Sample Payload:

Sample JSON

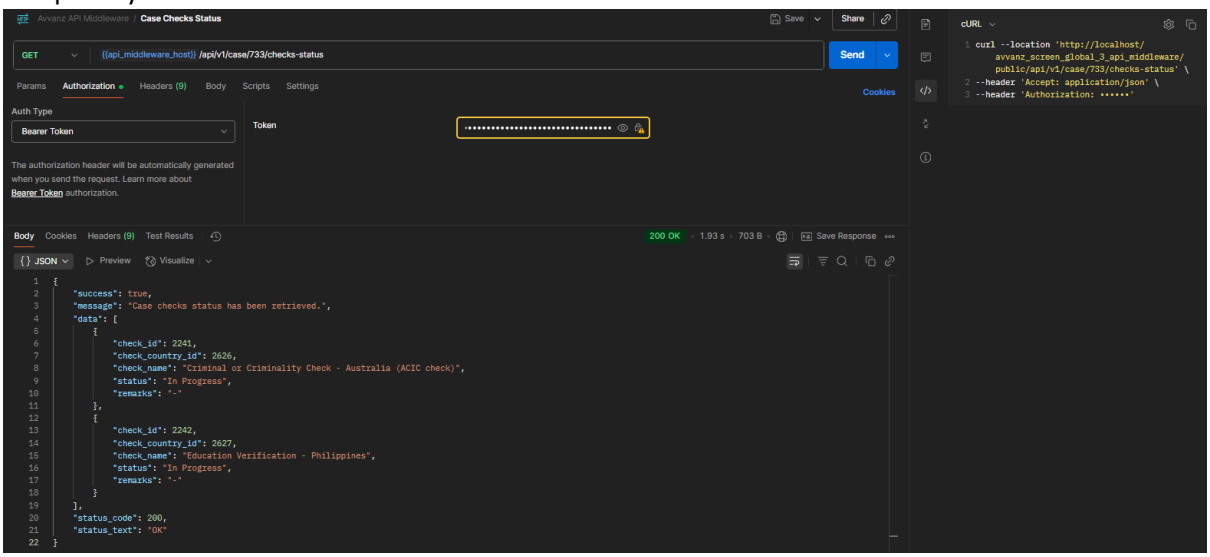

```
{
    "success": true,
    "message": "Case status has been retrieved.",
    "data": {
        "case_id": 733,
        "ref_no": "tpj4913",
        "package_name": "test",
        "data_entry_by": "Candidate",
        "candidate": "John Doe",
        "email": "jhon@avvanz.com",
        "phone_no": "098999999",
        "position_applied": "TR053606",
        "status": "Cancelled",
        "order_id": null,
        "result": null,
        "checks": [
            {
                "check_id": 2241,
                "check_country_id": 2626,
                "check_name": "Criminal or Criminality Check - Australia (ACIC check)",
                "status": "In Progress",
                "remarks": "-"
            },
            {
                "check_id": 2242,
                "check_country_id": 2627,
                "check_name": "Education Verification - Philippines",
                "status": "In Progress",
                "remarks": "-"
            }
        ]
    },
    "status_code": 200,
    "status_text": "OK"
}
```

Get Case Checks Status

Endpoint: HTTP GET /api/v1/case/{case_id}/checks-status
Description: Get all Case checks status. Replace the “case_id” with the correct Screen Global Case ID.
URL Parameters:

Field	Type	Description	Mandatory
case_id	int	Case ID from create case endpoint	Yes

Sample Payload:

Sample JSON:

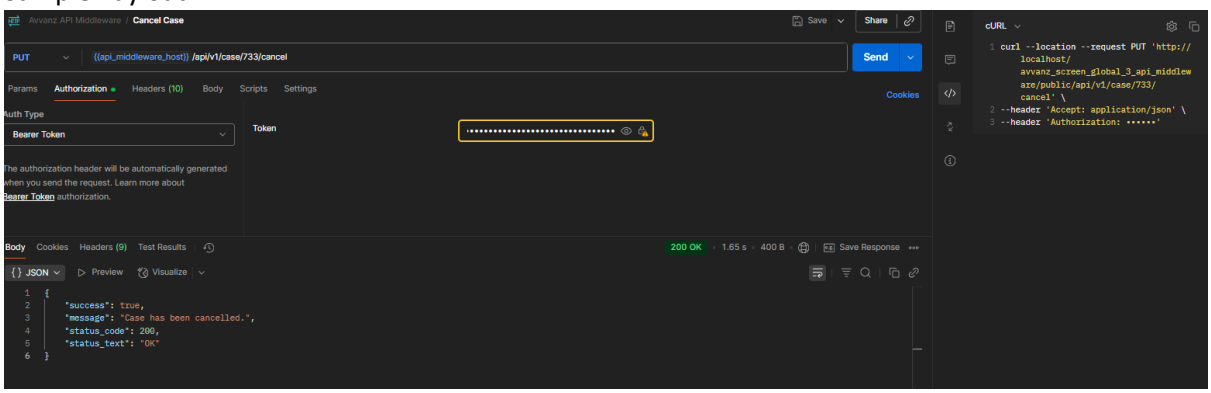

```
{
    "success": true,
    "message": "Case checks status has been retrieved.",
    "data": [
        {
            "check_id": 2241,
            "check_country_id": 2626,
            "check_name": "Criminal or Criminality Check - Australia (ACIC check)",
            "status": "In Progress",
            "remarks": "-"
        },
        {
            "check_id": 2242,
            "check_country_id": 2627,
            "check_name": "Education Verification - Philippines",
            "status": "In Progress",
            "remarks": "-"
        }
    ],
    "status_code": 200,
    "status_text": "OK"
}
```

Cancel Case

Endpoint: HTTP PUT /api/v1/case/{case_id}/cancel
Description: Created case can be cancelled using this endpoint. Only Cases under "**Insufficient Data**" and "**Ready For Checkout**" are allowed to cancel. Replace the "case_id" with the correct Screen Global Case ID.
URL Parameters:

Field	Type	Description	Mandatory
case_id	int	Case ID from create case endpoint	Yes

Sample Payload:

Sample JSON

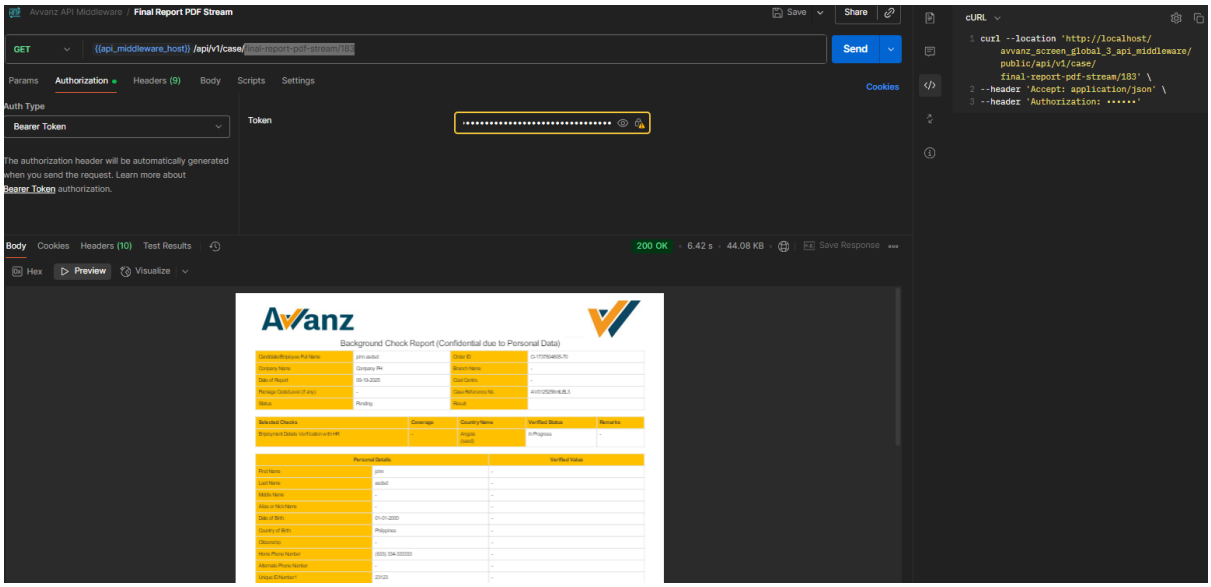

```
{
    "success": true,
    "message": "Case has been cancelled.",
    "status_code": 200,
    "status_text": "OK"
}
```

Case Final Report PDF Stream

Endpoint: HTTP GET /api/v1/case/final-report-pdf-stream/{case_id}
Description: Get/Download Case final report PDF stream. Replace the "case_id" with the correct Screen Global Case ID.
URL Parameters:

Field	Type	Description	Mandatory
case_id	int	Case ID from create case endpoint	Yes

Sample Payload:

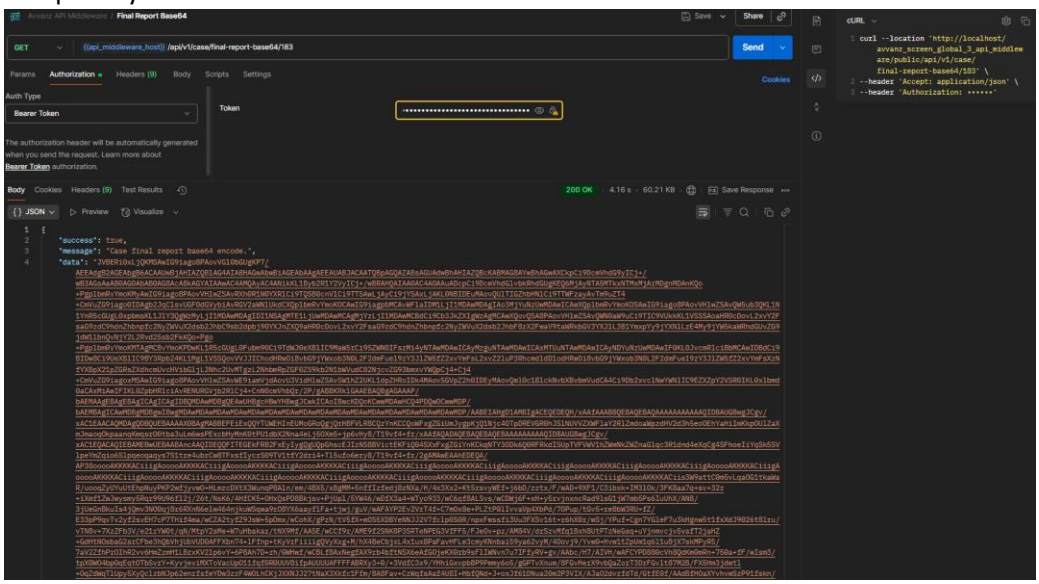

Case Final Report Base64 Format

Endpoint: HTTP GET /api/v1/case/final-report-base64/{case_id}
Description: Get Case final report Base64 encode. Replace the “case_id” with the correct Screen Global Case ID.
URL Parameters:

Field	Type	Description	Mandatory
case_id	int	Case ID from create case endpoint	Yes

Sample Payload:

Sample JSON:

```
{
    "success": true,
    "message": "Case final report base64 encode.",
    "data": "Base64_data_here",
    "status_code": 200,
    "status_text": "OK"
}
```

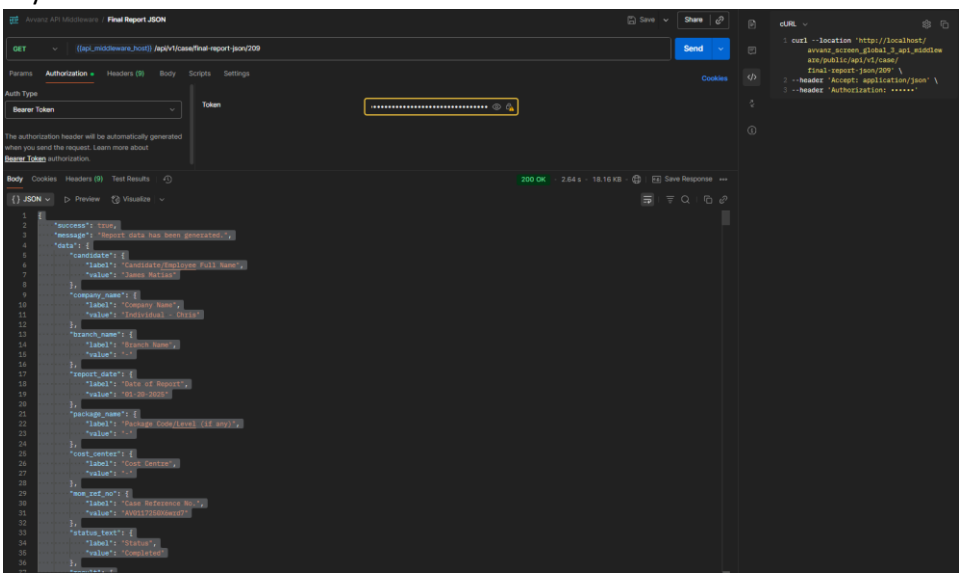

Case Final Report JSON Format

Endpoint: HTTP GET /api/v1/case/final-report-json/{case_id}
Description: Get Case final report in JSON format. Replace the “case_id” with the correct Screen Global Case ID.

URL Parameters:

Field	Type	Description	Mandatory
case_id	int	Case ID from create case endpoint	Yes

Sample Payload:

Sample JSON:

```
{
    "success": true,
    "message": "Report data has been generated.",
    "data": {
        "candidate": {
            "label": "Candidate/Employee Full Name",
            "value": "James Matias"
        },
```

```
        "company_name": {
            "label": "Company Name",
            "value": "Individual - Chris"
        },
        "branch_name": {
            "label": "Branch Name",
            "value": "-"
        },
        "report_date": {
            "label": "Date of Report",
            "value": "01-20-2025"
        },
        "package_name": {
            "label": "Package Code/Level (if any)",
            "value": "-"
        },
        "cost_center": {
            "label": "Cost Centre",
            "value": "-"
        },
        "mom_ref_no": {
            "label": "Case Reference No.",
            "value": "AV0117250X6wrd7"
        },
        "status_text": {
            "label": "Status",
            "value": "Completed"
        },
        "result": {
            "label": "Result",
            "value": "green"
        },
        "personal": {
            "first_name": {
                "label": "First Name",
                "candidate_value": "James",
                "verified_value": null,
                "remarks": null
            },

Get Case Price

Endpoint: HTTP GET /api/v1/case/{case_id}/price
Description: Get Case price details. Replace the “case_id” with the correct Screen Global Case ID.

URL Parameters:

Field	Type	Description	Mandatory
case_id	int	Case ID from create case endpoint	Yes

Sample Payload:

Sample JSON:

```
{
    "success": true,
    "message": "Case price details has been retrieved.",
    "data": {
        "items": [
            {
                "check_name": "Credit Check - Malaysia (Standard Credit Check)",
                "price": "20.00"
            },
            {
                "check_name": "Criminal or Criminality Check - Malaysia",
                "price": "30.00"
            }
        ],
        "currency": "USD",
        "sub_totaL": "50.00",
        "additional_cost_total": "0.00",
        "discount_total": "0.00",
        "tax": "0.00",
        "total_due": "50.00"
    },
    "status_code": 200,
    "status_text": "OK"
}
```

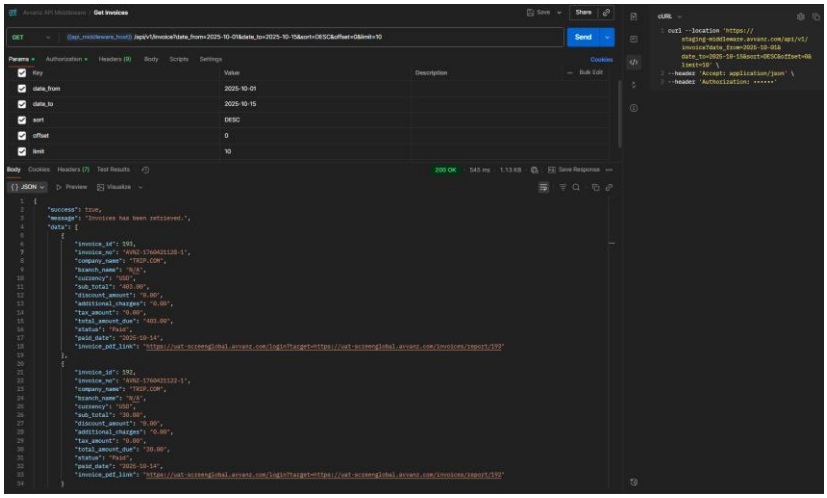

Get Paid Invoice

Endpoint: HTTP GET /api/v1/invoice
Description: Get the list of all paid invoice.
Parameters/body:

Field	Type	Description	Mandatory
date_from	String(10)	Invoice created date from.	No

date_to	String(10)	Invoice created date to.	No
sort	String(3)	Sort order (ASC or DESC)	No
offset	String(100)	Offset of the records starts with 0.	No
limit	String(10)	Limit the records per request.	No

Sample Payload:

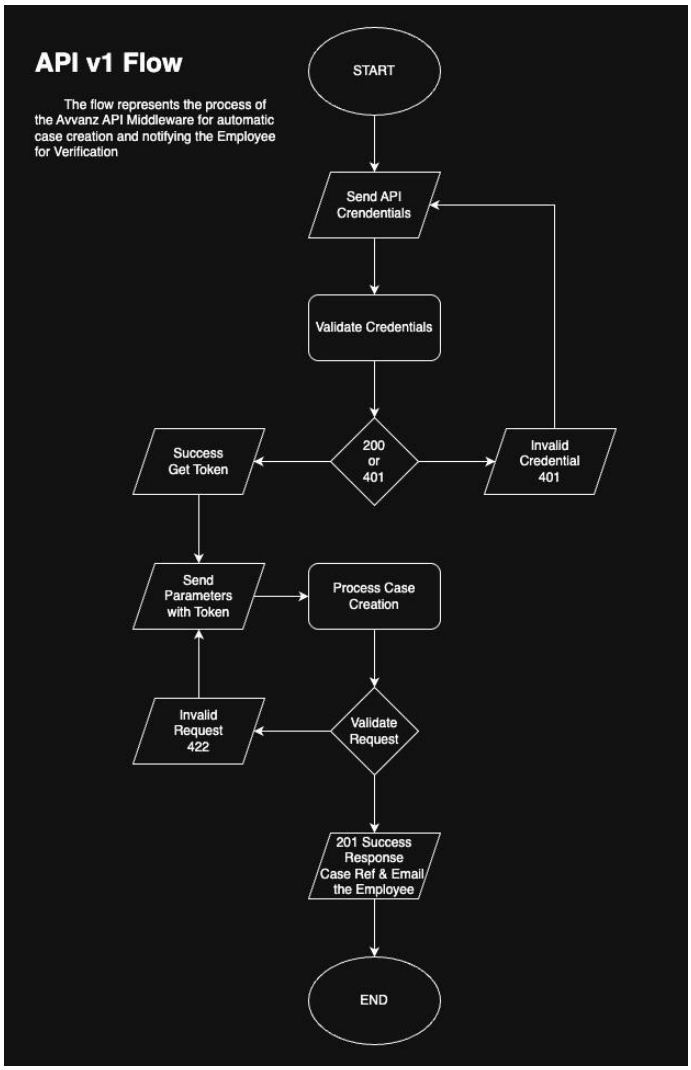

Sample JSON

```
{
    "success": true,
    "message": "Invoices has been retrieved.",
    "data": [
        {
            "invoice_id": 193,
